

IN THE ABSTRACT:

Please amend the Abstract as follows:

A recording medium storing an AVClip structured by multiplexing video stream and a graphics stream. The ~~graphics~~ video stream represents a moving picture made of a plurality of pictures, and the graphics stream includes graphics data representing ~~graphics~~ stream includes graphics data representing graphics to be combined with pictures. The graphics stream also includes window information (WDS) that specifies a window for rendering the graphics, and that indicates a width, a height and a position of the window on a plane which is a plane memory of a reproduction apparatus that combines the graphics with the pictures.
